Published at irregular but frequent intervals since 1950, *Postilla* presents short papers based on original scientific research by Yale Peabody Museum staff and research associates, and their colleagues, in the natural science disciplines represented by the collections of the Yale Peabody Museum's curatorial divisions.

All manuscript submissions are sent out for external peer review by one or more referees, as well as being reviewed internally at the Peabody Museum by the Executive Editor in consultation with the Curatorial Editor-in-Chief and one or more members of the appropriate curatorial division. Interested authors should contact the Executive Editor at the address below before submitting manuscripts.

Other titles published by the Yale Peabody Museum are the *Bulletin of the Peabody Museum of Natural History* and the *Yale University Publications in Anthropology*. A complete list of titles, availability and ordering information as well as submission guidelines for contributors can be obtained from the Yale Peabody Museum website at <http://www.peabody.yale.edu/publications/> or requested from the Publications Office at the address below.

**Abstract**

Type material for 373 nominal species of fossil gastropods is in the Invertebrate Paleontology Collections of Yale University's Peabody Museum of Natural History. Primary types for 193 nominal species include 164 holotypes, 191 syntypes (representing 29 nominal species) and 4 lectotypes. Secondary types for 79 nominal species include 228 paratypes (representing 75 nominal species) and 9 paralectotypes (representing 4 nominal species). Tertiary types of 172 nominal species include 1034 hypotypes. Most types are from St. Louis (Missouri), Chazy (New York), Zorritos (Peru) and Syria and have been described by T.D.A. Conrad, J. B. Knight, E.T. Nelson and P.E. Raymond.

**Introduction**

This catalog lists all known fossil gastropod types in the Invertebrate Paleontology Collections housed in Yale University's Peabody Museum of Natural History. This is the ninth in a series of type catalogs of fossil invertebrates and is a product of an ongoing computerization project to improve the accessibility of the type collections.

Eight type specimens are missing and cannot be located. The collections have been thoroughly searched by the curatorial staff in the 1960s and 1990s and it is believed that these specimens are permanently lost. Missing specimens are indicated with a footnote, and any information on their whereabouts would be greatly appreciated.

**Organization**

Specimens are listed under the originally described binomen; genera and species within genera are indexed alphabetically. Each entry includes the catalog number used by the Division of Invertebrate Paleontology prefixed with the abbreviation YPM and the type status of the original designation, followed by all known references to that specimen. Any subsequent designations are listed under the original designation and are cross-referenced in the body of the text. Locality descriptions follow each entry or set of entries for each binomen. Errors and inconsistencies are footnoted at the bottom of each binomen.

The type designations used are holotype, syntype and lectotype for name bearers; paratype and paralectotype for secondary

types; hypotype is used for all tertiary types. Name bearers and secondary types are defined as used in the *International Code of Zoological Nomenclature* (ICZN 1985). Tertiary types or hypotypes are treated here as any described, figured or measured specimen used in a publication to augment the knowledge of a previously defined species, any specimen used in an original species description but not explicitly designated a primary or secondary type, or any referenced specimen that cannot be placed unequivocally in a known species (e.g., *Hormotoma?* sp. A).

Locality descriptions follow each entry or set of entries with identical locality data. The locality information includes the stratigraphy, geography, collector and date. Stratigraphy has been standardized using *Stratigraphic Nomenclature Databases for the United States, its Possessions and Territories* (MacLachlan et al., 1992).

Middle Pennsylvanian, Marmaton Grp, Labette Shale. Top of Labette exposed along headwater branches of Feefee Creek, 0.6 mi W of Lackland Station, C.R.I. & P. Railroad, 1 mi NW of Stratman, St. Louis Co., Missouri, USA. Collector: Knight, J.B.

HYPOTYPE YPM 32944

Knight, J.B. 1933a. J. Paleont. v.7, n.1, p.49, tbl.(p.50), pl.10, f.2d,2e.

Middle Pennsylvanian, Marmaton Grp, Pawnee Limestone. Decomposed blocks and residual from lower 2 ft of Pawnee exposed in street making in Davis Place subdivision first street W of Kirkwood-Ferguson trolley tracks and 200 ft N of Clayton Road, Clayton, St. Louis Co., Missouri, USA. Collector: Knight, J.B.

<sup>a</sup>This specimen is a thin section.
